Abstract: Metz Software's $49.95 Task Manager 2.0 is a low-priced, easy-to-use Microsoft Windows application launcher that is surprisingly powerful. It replaces the Windows Task Manager and can be configured to pop up when the user clicks on the desktop. The program provides both list and **toolbar** launching, extensive preference **settings** , hotkey launching, **scheduled** launching and task switching. There is a DOS-command line window and a variety of other features, including file management, system information, online help, file searching and a screen saver that works with DOS applications. The toolbox is built into Task Manager's screen and cannot be reconfigured.

Text:

```
$49.95

METZ SOFTWARE
      P.O. BOX 6699, BELLEVUE,
      WA 98008
      (800) 447-1712, (206) 641-4525
      Metz Software's newly released Task Manager is a joy to use. Scoring
second on our 20-point features checklist and earning a strong honorable
mention, this $49.95 program is an amazing value. By design, Metz Task
Manager is a Windows Task Manager replacement. Press Ctrl-Esc, and it pops
up onscreen in a box similar to Windows' Task Manager, but larger. You can
configure it to pop up when you click on the desktop and have it unload
from memory when not in use. You can even configure it so that when you
summon, it, either its launch list or its icon-based task list pops up, so
you don't lose a whit of Windows' Task Manager's functionality. There's
just no downside to installing this program as your task manager.
      Among Metz Task Manager's finer qualities are both list and   toolbar
launching, extensive preference   settings , hotkey launching, document
loading with applications,   scheduled   launching, and task switching.  It
also offers a DOS command-line window, file management, system information,
file searching, online help, a screen saver that works with DOS apps, and
buttons for controlling window arrangements. The biggest drawback to Metz
```

Task Manager concerns the toolbox, which Metz aptly describes as the Launch
Pad, since it's built into Task Manager's screen and offers nine buttons in
a three-by-three square. You can't configure the size of the button pad or
the number of buttons, and you can't preconfigure multiple launch pads that
you can call up as needed. Its application-suite launching capabilities are
also limited.

Task Manager should earn a place in your Windows installation even if
you wind up choosing another launcher as No. 1. You're not giving up a
thing by installing Metz Task Manager--except the lost time you would spend
hunting around for applications. Some advice: Buy it first. You might never
need anything else.
